Abstract

Isabelle is a formal document preparation system. This example shows how to use it together with the Easychair style. See https://easychair.org/publications/for_authors for further information.

- 1.2.1 Some subsubsection

```
A paragraph. Informal bla bla. definition foo = True — side remark on Document.foo definition bar = False — side remark on Document.bar lemma foo \langle proof \rangle
```

Another paragraph. See also [1, §3].

2 Formal proof of Cantor's theorem

Cantor's Theorem states that there is no surjection from a set to its powerset. The proof works by diagonalization. E.g. see

- https://en.wikipedia.org/wiki/Cantor's_diagonal_argument

```
theorem Cantor: \nexists f:: 'a \Rightarrow 'a \ set. \ \forall \ A. \ \exists \ x. \ A = f \ x proof assume \exists f:: 'a \Rightarrow 'a \ set. \ \forall \ A. \ \exists \ x. \ A = f \ x then obtain f:: 'a \Rightarrow 'a \ set where *: \ \forall \ A. \ \exists \ x. \ A = f \ x. let ?D = \{x. \ x \notin f \ x\} from * obtain a where ?D = f \ a by blast moreover have a \in ?D \longleftrightarrow a \notin f \ a by blast ultimately show False by blast qed
