Abstract. Isabelle is a formal document preparation system. This example shows how to use it together with the Springer LaTeX LNCS style. See `https://www.springer.com/gp/computer-science/lncs/conference-proceedings-guidelines` for further information.

Keywords: Document preparation

1 Some section

1.1 Some subsection

1.2 Some subsubsection

Some subsubsubsection

A paragraph. Informal bla bla.

definition *foo = True* — side remark on *Document.foo*

definition *bar = False* — side remark on *Document.bar*

lemma *foo* ⟨*proof*⟩

Another paragraph. See also [1, §3].

2 Formal proof of Cantor's theorem

Cantor's Theorem states that there is no surjection from a set to its powerset. The proof works by diagonalization. E.g. see

- `http://mathworld.wolfram.com/CantorDiagonalMethod.html`
- `https://en.wikipedia.org/wiki/Cantor%27s%5fdiagonal%5fargument`

theorem *Cantor*: $\nexists f :: {'}a \Rightarrow {'}a\ set.\ \forall A.\ \exists x.\ A = f\,x$
proof
  assume $\exists f :: {'}a \Rightarrow {'}a\ set.\ \forall A.\ \exists x.\ A = f\,x$
  then obtain $f :: {'}a \Rightarrow {'}a\ set$ **where** $*: \forall A.\ \exists x.\ A = f\,x$ **..**
  let $?D = \{x.\ x \notin f\,x\}$
  from $*$ **obtain** a **where** $?D = f\,a$ **by** *blast*
  moreover have $a \in ?D \longleftrightarrow a \notin f\,a$ **by** *blast*
  ultimately show *False* **by** *blast*
